EXPERIENCE

Application Developer II

Austin, Texas

ERCOT

July 2023 - Present

- Primary developer for a \$2.5M power grid communications project owning end-to-end backend architecture and database design
- Led backend performance optimization efforts by tuning database queries to improve response times and implementing pagination and indexing strategies that reduced CPU saturation during load testing
- Designed and implemented over 20 SQL database tables with constraints, procedures and indexing strategies
- Collaborated cross-functionally with ERCOT operators, and developers to gather feedback and translate requirements into an application design
- Added automated unit and integration tests covering messaging success and error scenarios, improving reliability and reducing regression risk
- Developed OpenAPI specifications for core messaging APIs, improving documentation quality and API maintainability
- Contributed to GridGeo, a React and Java-based single page application used to visualize the Texas power grid in real time

Project: Power Grid Communications Platform Rewrite (POC)

- Rebuilt the core functionality of a legacy Servlet/JDBC application as a Spring Boot and Hibernate proof of concept to evaluate scalability and maintainability
- Implemented REST APIs with validation, pagination, and CSV export to demonstrate feature parity with the legacy application
- Added global exception handling using custom exceptions and error responses to improve API reliability
- Integrated LDAP authentication for secure enterprise access using Spring Security

EDUCATION

University of Texas at Austin

August 2024 - May 2026

Masters of Data Science

GPA: 3.73

University of Illinois at Urbana-Champaign

August 2019 - May 2023

Bachelor of Science in Electrical Engineering with Honors

GPA: 3.78

SKILLS

- **Programming Languages:** Java, SQL, Python, JavaScript
- **Frameworks:** Spring Boot, Hibernate, Spring Security, JUnit, Selenium, React
- **Tools & Platforms:** Git, Apache Tomcat, Maven
